

The Studio Range

The Studio Designer

The Studio-Designer range utilises casements from the standard Conservation Rooflight® range assembled on to one single purpose-designed base-plate, casements are only 12mm apart for the Conservation Rooflight®. The result is a completely seamless run of roof windows, any or all of which can be opened.

The Studio-Designer range is an ideal method of allowing large amounts of light penetration on a pitched roof while maintaining an elegant internal and external appearance.

Please note all Studio Designer Rooflights are Custom Made to your specification and restocking charge will be applied if returned.

T-Bar Linking

For projects requiring a run of finely detailed, low-profile roof windows, the Linked Conservation Rooflight® provides the ideal solution.

The T-Bar options offers the possibility of linking 11 sizes of the Conservation Rooflight® in a cost-effective way. With this method of linking there is no limit to the number of the same length roof windows in a run.

Please note all T-bar linked Rooflights are Custom Made to your specification and restocking charge will be applied if returned.

Type A Linking

Type A linking reduces the gap between casements and can be used to link single casements, Studio Designer or T-bar roof windows into vast arrays of rooflights.

Type A linking requires a modification to the baseplate and results in small gap between casements on separate baseplates. This is a bespoke option so please contact our bespoke team to find out more.
