Is my roof type suitable for a Flashing Kit?

The Flashing Kit is designed to be used with all 'On the Rafter' pitched roof window installation and is suited to almost all types of roof tile or slate. It is supplied with flashing at the head and cill, together with a single continuous PVCu Soaker at each jamb, designed to be cut at predefined heights* to match the finished roof line. As the detail (below) illustrates, providing that your roof build-up remains below 75mm, your installation will be suitable for a Flashing Kit. If in doubt call our technically-trained Customer Services team on 01993 833155.
